

#### LOCATION

Murray Bridge, South  
Australia

#### CLIENT

Murray Bridge Council

#### CATEGORY

Redevelopment

#### FEATURES

Natare Pre-fabricated Gutter  
System, Microflo Filtration  
System, Commercial PVC liner

## Murray Bridge Swimming Centre

Stage 1 of The Murray Bridge Swimming Centre Master-plan has been completed and the results are spectacular. Not only have works improved the visual appeal of the pools, our water treatment works have improved the quality of the water in the pools, giving residents and visitors access to beautifully clean water for swimming.

Hydrilla were successfully awarded the tender for the works which included the installation for a custom Natare 316SS Stainless steel gutter, Commercial grade PVC Pool lining system, installation of finger grip and water line tiles, 3 active main drains; Chlorine Gas System, Natare Vacuum Sand Filter and replacement of the concourse surrounding the 50m pool.

While we investigated other renovation options for this project the Natare system provided significant cost advantages whilst also eliminating risk's associated with existing control joints where new structure meets old

The continuous perimeter supply system for the filtered water ensures that the filtered and treated water is properly mixed in the pool in a shorter space of time, ensuring no dead areas (parts of the pool where the circulation current cannot easily reach) are left in the pool.

The Murray Bridge renovation is the first Hydrilla project in Australia to feature both Natare gutters and vacuume sand filter combined with a chlorine gas system. Tracking the quality of the water since the pool opened to the public in late October 2020, has so far shown outstanding results and beautifully clean, clear and safe water.
