Calvary Adelaide Hospital

Located in the CBD, the new Calvary Adelaide Hospital is the largest private hospital ever constructed in South Australia. Located on Level 7, the hydrotherapy pool allows even the most fragile and mobility restricted patients the opportunity of purposeful movement and exercise, leading to a more rewarding lifestyle.

The pool, built in collaboration with Primary contractor, John Holland, features stainless steel handrails around the perimeter and stair entry, a patient lift provides the accessibility solutions as a compliant ramp entry was not possible given the dimensions of the pool.

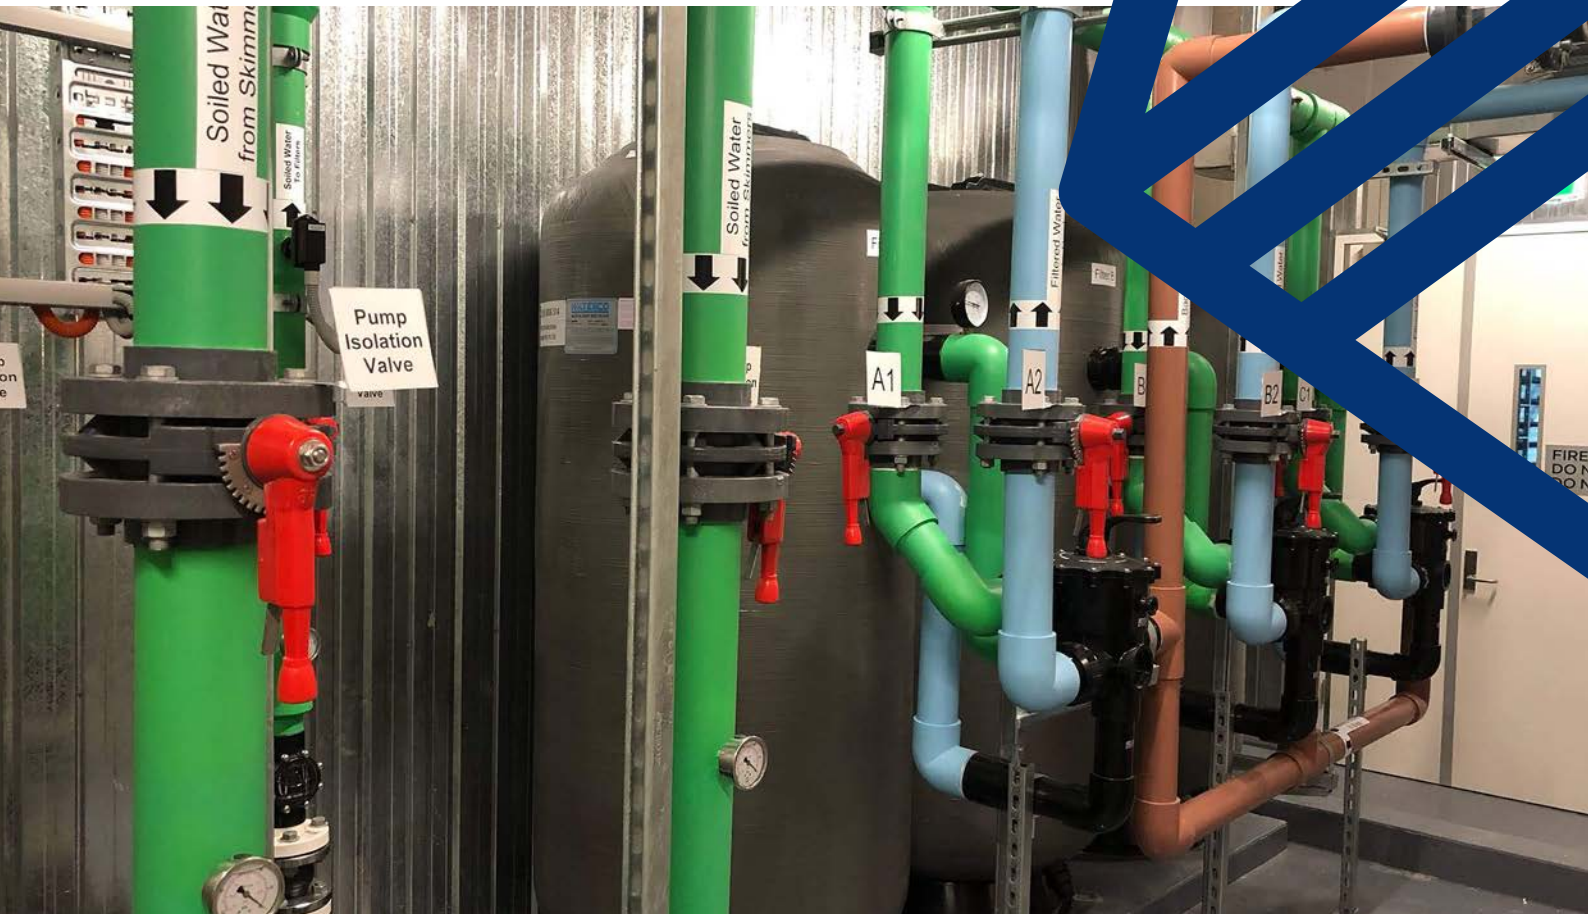

Our focus for the Calvary pool was the water supply and filtration system, making sure there is clean, safe water in the pool at all times. Our plant room fit out and construction fitted in seamlessly to the main contractors program and once the structure had been completed with our piping works, we set to work finishing the pool.

After thorough hydrostatic testing we commenced waterproofing, tiling and stainless steel fit outs to finish the pool to the high specifications of the rest of this private medical facility. After full commissioning and training from our pool operations and service team we have partners with Calvary Care to service and maintain the pool for an initial 12 month period to ensure that the pool is operating as designed and that there are no water quality issues affecting the pools availability to clients.
