Flinders Medical Centre

Officially opened to the public in 2017 the Flinders Medical Centre Rehabilitation Centre offers hospital patients access to on site, state of the art rehabilitation services. Having built the existing hydrotherapy pool in 1998 we were thrilled to work alongside Hansen Yunken to build its modern replacement.

The South Australian State Government invested \$185.5 million to improve and upgrade facilities at Flinders Medical Centre in 2016, which included the Hydrilla team (then State Wide Pool Services), being selected once again as the preferred pool builder for the centre's state of the art therapy pool.

The 21m x 9m hydrotherapy pool provides an important resource for patients managing chronic health conditions and supports rehabilitation for both inpatients and outpatients. The depth of the pool varies from 1.1m at the foot of the entry stairs to 1.7m at the opposite end. Flush wet deck grating envelopes the perimeter of the pool, creating a striking change from the concourse paving

The pool was built using a strong 'box and pour' technique and further works completed by our team include:

- Pool Reticulation System
- Disinfection Systems
- Pool heating systems,
- Complete tiling and joint work
- Stainless steel fitout.
- Pool Blanket & Robot Cleaner
