Infinity Edge Apartment Pool

Central Adelaide Apartments

Completed in 2017 the Central Adelaide Apartments infinity edge pool with its distinctive red skylight and enviable view has become a well known apartment pool in the South Australian capital.

Located on the 17th storey the Adelaide Central Apartments building is the infinity edge 'sky-pool'. We teamed with Watpac Construction to design and construct this stunning pool which completes the entertainment options available to residents of this modern apartment complex.

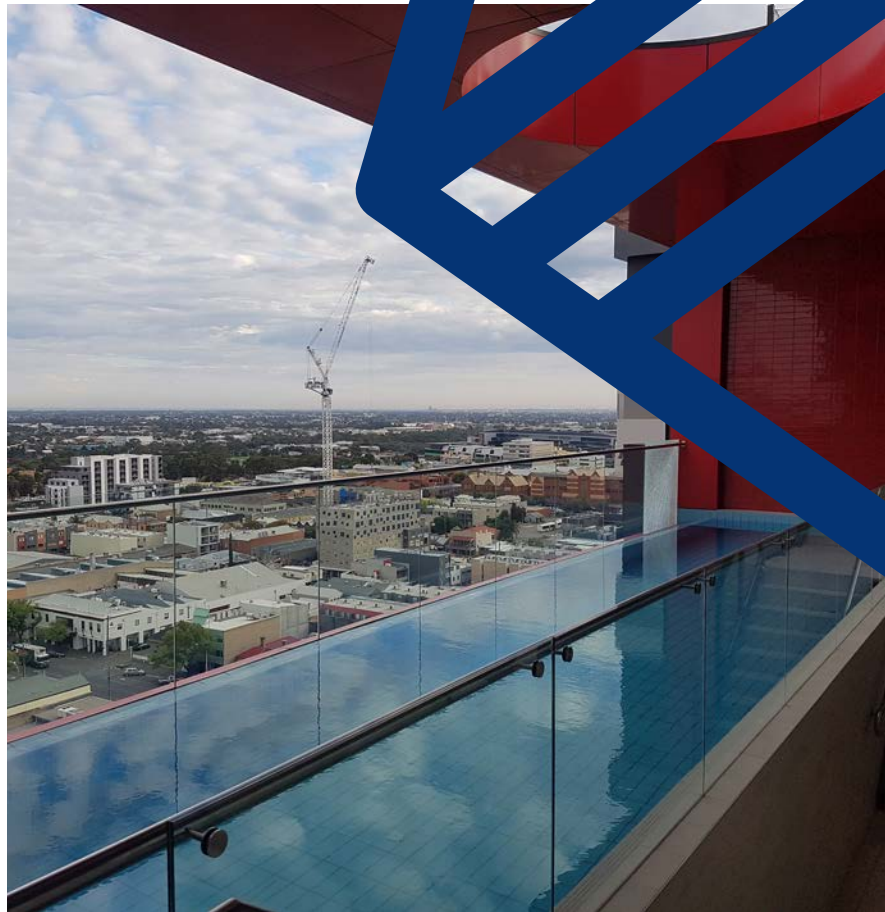

The fully tiled, formed and poured concrete structure is a 3.4 meter wide, 15 meter long lap pool with a constant depth of 1.2 meters. The glass balustrade gives the illusion of an infinity edge, with the required safety for bathers. The pool water is gas heated, allowing residents to have year round access to the western facing pool with uninterrupted views of the sunset across the waters of Gulf St Vincent.

Drawing on our knowledge and expertise in water treatment we were able to design and build a water treatment system for the pool which produces high quality filtered and sanitized water with a minimal footprint and low energy costs. Saving valuable space and long term operating costs for the pool operators.
