

LOCATION
Mortlake, Victoria

CLIENT
Moyne Shire Council

DETAILS
Redevelopment

FEATURES
Wet Deck Gutter Conversion
Pipework Alterations
PVC Liner Installation
Concourse Paving

Mortlake Swimming Pool

The Mortlake Swimming Pool was officially opened in 1963 and is a treasured asset to the local community as a sporting and recreation facility. Like many swimming pools in smaller communities across the country, the pool needed some renovation work to ensure it remained an economically sound asset for the council and community.

In 2017 we were successful in winning the tender to upgrade and rejuvenate the existing 50m pool. Works included converting the pool from a scum gutter to a modern wet deck, giving the pool an updated reticulation system, improving the water quality overall. To achieve this, partial demolition of the existing pool structure was required and included saw cutting and removal of the existing external concourse. Due to the age of the pool, some alterations and upgrades were necessary for the perimeter pipe work of the pool.

To further improve the pool functionally and visually we installed a light blue, Aqua Force membrane, with black lane lines to confirm to FINA specifications. Preparation works for the liner included removing any rough and uneven surfaces, the liner was then installed over the existing painted concrete. The all welded seams of the liner are watertight, giving the aging concrete structure additional support and will assist with leaks and cracks in a pool of this age.

Paving to the new reinforced concourse was completed along with the installation of new stainless steel fittings including, step handrails, access ladders and lane rope anchors. Overall the Mortlake pool renovation provided a brand new look and feel to a much-loved asset.
