HYDRILLA

INNOVATORS IN COMMERCIAL POOLS AND AQUATICS

We simplify aquatic challenges and deliver outstanding service
from concept through to construction and maintenance

EOS by SkyCity, Adelaide

IMPORTANT INFORMATION

Commercial swimming pools and aquatic facilities come in all shapes and sizes. Unique features and options at the time of construction mean that no two facilities are the same.

Due to the uniqueness of our client's pools, we've always felt creating a catalogue would be an impossible task. How could we possibly create a resource for you that covered all your needs and gave you all the options, without it looking like the Yellow Pages circa 1988!

Our approach has always been to offer a more bespoke service so rather than listing 50 options for new starting blocks or lane ropes our aim with this publication is to give you an idea of what we can source, of what we think is the best or newest product on the market and when you are ready for specifics we urge you to get in touch and allow us to source the best solutions for your needs and budget.

Innovation and sustainability are changing the face of the pool industry at a rapid pace, and new products are being launched all the time. Our approach to a product catalogue will mean that we can quote you on the most recent products and ideas to hit the industry giving you options that help your facility become more efficient and 'green' as a result.

We hope that the catalogue is a beneficial resource for you and that as you look through the pages you'll think "I didn't know Hydrilla could do that".

POOL GRATING & SIGNAGE

Broken and stained grating can be a safety hazard and look unsightly. We can source replacement sections to match your existing grating or work with you to upgrade your entire grating. Depending on the application, your budget and aesthetic requirements we can suggest options in UV-stabilised polypropylene, stainless steel, stone, or ceramics.

An essential safety component for bathers and staff of any aquatic facility is to be aware of water depths and any potential hazards. Signage can include depth markers, (off-the-shelf or bespoke options), First-aid, CPR, Chemical and Water Treatment hazard warnings, facility rules and other legal signage requirements. If you are unsure of what you need, we can work with you to ensure you are protecting all users.

STARTING BLOCKS & LANE ROPES

Depending on your needs we can supply and install starting blocks that will ensure your facility can offer great training and competition. Entry-level starting blocks are generally made from reinforced fibreglass, additional features and FINA compliance specifications are available for more premium offerings. Other options include fitted covers and backstroke start ledges that can be sourced for your new or existing starting blocks.

Separating sections of the pool, defining swimming lanes and reducing waves in the pool, lane ropes play an important part in most commercial swimming centres. Options are available depending on your needs and the look of your pool. We can supply and install FINA-compliant options through customised colours and patterns to give personality to your centre or pool. We can also support you with lane rope tensioners, anchors, storage, and reels to keep your ropes in perfect condition.

RAILS & LADDERS

Ladders and rails are essential safety features of any pool, helping keep bathers safe on entry, exit and during pool use in some instances such as Hydrotherapy and Learn-to-Swim pools. Naturally, there are multiple ready-made options that we can source to replace and improve your existing rails.

For clients looking for a more customised look or to improve safety in a complicated area, we can source compliant options designed specifically to suit your needs. Typically rails and ladders are 316L Marine Grade Stainless Steel, however, powder coating and other options are available if desired.

POOL COVERS

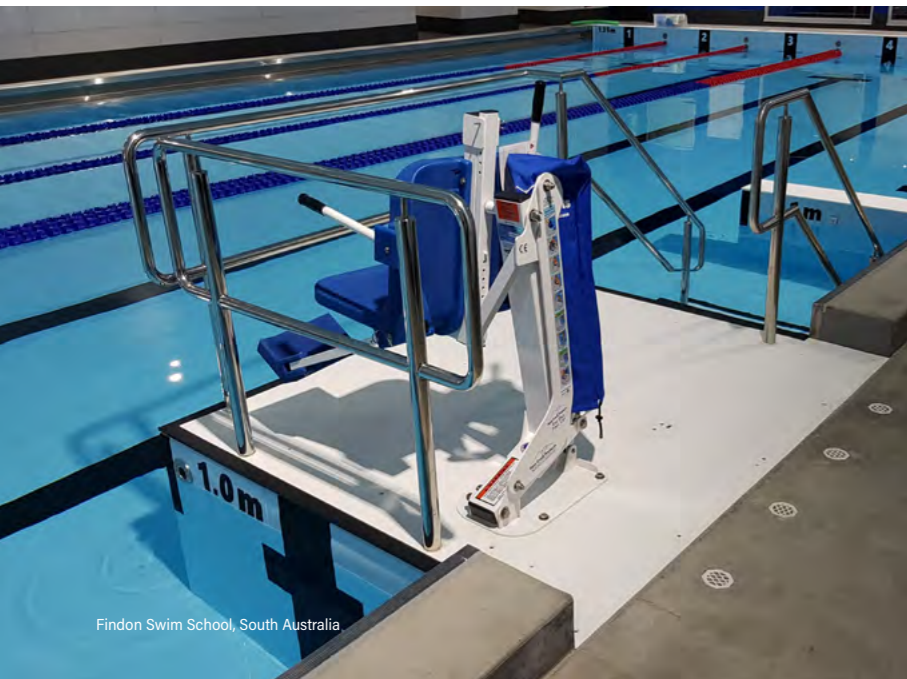

The right pool cover will save your facility money. Covering the pool with a high-quality thermal pool blanket when not in use will prevent heat loss, water evaporation and loss of chemicals. Commercial-grade pool covers are available for both indoor and outdoor pools, they are built strong to withstand the harsh aquatic environment and in most cases are UV stabilised.

Additional choices available are storage rollers, either manual or motorised which can be fixed in locations like under seating, be completely mobile, wall mounted or stored away underground and out of sight when not in use.

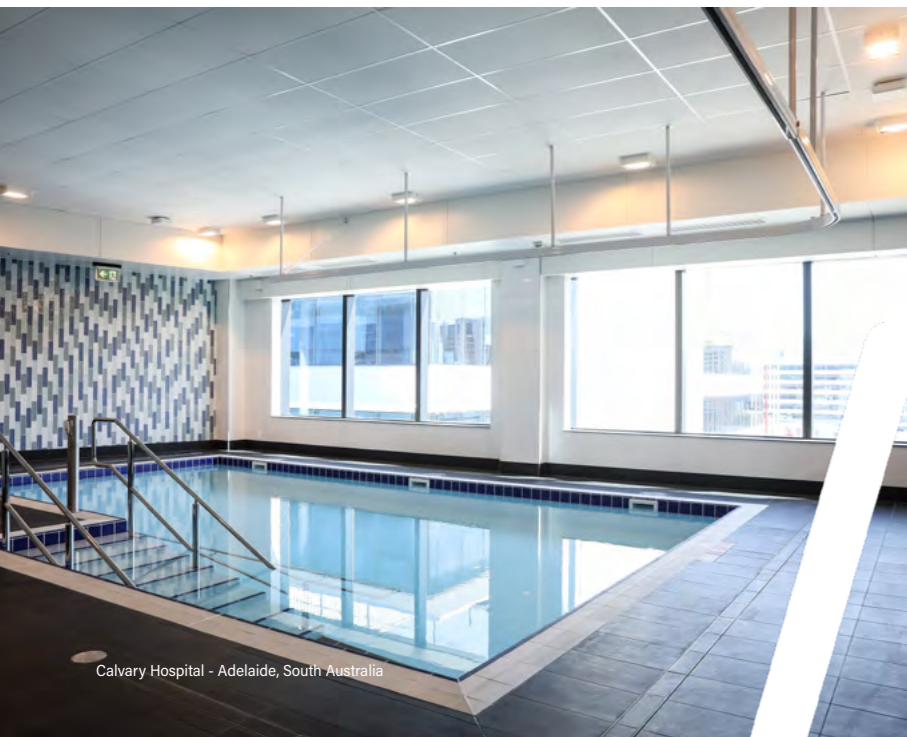

Innovations in hard, slat covers are an additional option for smaller pools in hospitality or other public locations.

ACCESS EQUIPMENT

The health and well-being benefits of swimming and hydrotherapy should be available for everyone to enjoy, including or improving options for people with disabilities or suffering from mobility challenges can increase patronage and ensures more users have access to your facility.

Through our range of distributors, we have access to a wide range of portable and permanent solutions that will help bathers enter and exit and use a pool safely.

Commercial-grade options available include aquatic wheelchairs, lifts, slings, movable platforms and ceiling hoists. Depending on your budget these can be manually operated or automated. In addition, we can source aquatic therapy and fitness supplies including aqua bikes, treadmills, floats and obstacle courses.

CHEMICALS & WATER TESTING

Keeping your pool clean, clear and a healthy swimming environment is the most important part of operating a commercial aquatic environment. We can make sure the chemical you are using in your facility are supplied in commercial strength and quantities.

Common Chemicals used in commercial aquatic environments include:

- | | |
|--------------------|--------------------|
| Sodium Bicarbonate | Calcium Chloride |
| Sodium Carbonate | Sodium Bisulphate |
| Pool Acid | Chlorine |
| Algaecides | Clarifiers |
| Flocculant | Metal Removers |
| Phosphate Remover | Chlorine Removers |
| Magnesium Sulphate | Magnesium Chloride |

In addition to chemicals, we can source and supply high-quality water testing kits and consumables to help make sure your water is balanced and safe for bathers at all times.

MAYTRONICS

Dolphin Wave commercial pool cleaners deliver a complete, exceptional pool experience. Bringing together more than 35 years of expertise in automated pool cleaning, every Dolphin robot combines advanced technologies with proven reliability to ensure maximum satisfaction, every time.

As a Maytronics Australia Master Dealer, Hydrilla offers comprehensive Sales and Service across all Wave Commercial Pool Cleaner models. Our unique, in-house service department offers regular servicing, fault finding, repairs and spare parts to keep your unit operating throughout the year. We even offer loan cleaners so that while your unit is being repaired your facility remains clean and safe for your community.

LIFE FLOOR

Life Floor is a foam-rubber flooring system created for use in wet areas with barefoot traffic. A more attractive and safer alternative to concrete and other conventional materials. Life Floor is the only safety surface specifically designed and engineered to perform in aquatic environments.

Life Floor combines award-winning safety with unparalleled design capabilities, delivered by an expert team committed to a world-class experience for everyone who interacts with their products.

Across the globe, people trust Life Floor to make their aquatic environments look and feel extraordinary. Samples and further information on Life Floor are readily available from Hydrilla

MYRTHA POOLS

As a Myrtha Dealer Hydrilla has access to some of the most innovative technology in the swimming pool industry. Fun, fitness, and competition are all enhanced by Myrtha's attention to the "shape of water".

There are two main products that we recommend from Myrtha:

Myrtha Technology: Myrtha's game-changing, proprietary, pre-engineered modular pool system features laminated stainless-steel panels with buttresses creating a sturdy, light and completely waterproof structure.

Renovaction: For Refurbishment and/or renovation of existing pools, Myrtha's RenovAction technology offers an intelligent and efficient solution based on Myrtha Pools' exclusive modular system.

WATER FEATURES & LIGHTING

By their very nature, water features are engaging and mesmerising with the choreographed lighting water features can make a huge statement no matter what type of development you are creating. Integrating water features in existing public spaces can activate places and increase enjoyment in your facility.

Water features and water play equipment can be installed in most aquatic facilities or be used to create dedicated splash pads or just simply enhance an already great playground.

The correct lighting in your pool can make your facility into a nighttime water playground or simply be used to create an atmosphere and ambience for other areas of your facility that look over the aquatic facilities.

Options for pool lighting are generally either surface or flush-mounted and come with manual or automated controls.

SYSTEMS & HEATING

Pool water treatment and heating systems are often complex and interconnected. Breakdowns and wear and tear will eventually mean some components will need to be replaced.

Our team regularly meet with leading commercial pool suppliers to learn about what is new and changing in the industry, so that we can make suggestions and offer advice on when replacing or upgrading any part of your pool's system could mean increased efficiencies and sustainability.

We can supply and install all manner of equipment including:

- Chemical Controllers
- Dosing Pumps
- Circulation Pumps
- Ultraviolet (UV) systems
- Gas Heaters
- Electric Heat Pumps
- Chemical storage tanks and Bunds

Where possible Hydrilla will recommend products that are approved with the Climate Care certification.
